

COMPUTER SYSTEMS FUNDAMENTALS (4COSC004W)

Lecture: Week 12. Part 2

Contact details

- Module Leader:
-

This week's lecture

- Network topologies
 - *Physical & Logical*
- Types of network
- Network components
- Network Collisions
 - *Avoidance*
- Network Infrastructure
- IP Addressing
 - *Calculations*
 - *Masking*
 - *Classless & Classful systems*
- Subnetting calculations

NETWORKS

NETWORK COMPONENTS

Actors on the Network

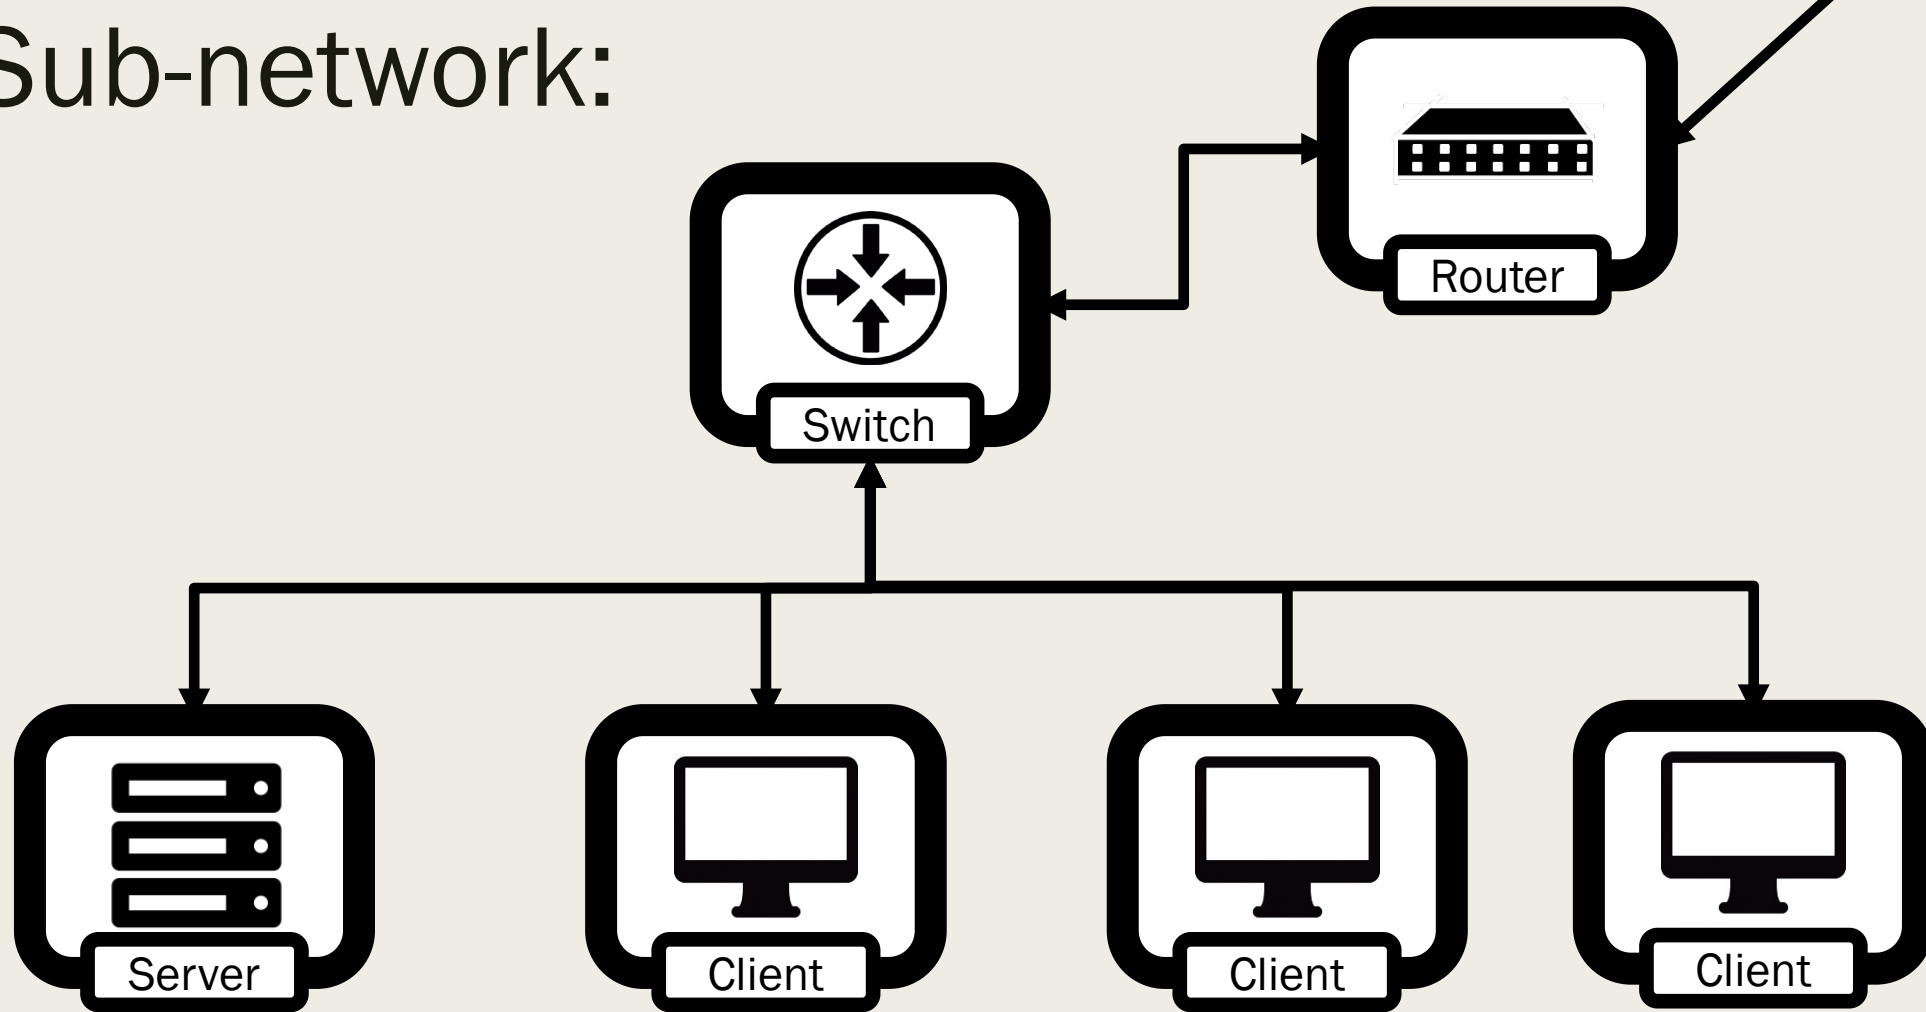

Network components:

Closed network:

Sub-network:

Complete network:

Complete Network – Tutorial

Complete Network – Reality

NETWORK COLLISIONS

Contention-Based Network Access

Collisions : non-collision scenario

- Occur in Broadcast topologies where nodes use shared media

Collisions : collision scenario

- Occur in Broadcast topologies where nodes use shared media

Contention-Based Network Access

- Carrier Sense Multiple Access / Collision Detection
 - CSMA/CD
 - *Commonly used in Wired Ethernet*
- Carrier Sense Multiple Access / Collision Avoidance
 - CSMA/CA
 - *WiFi*

CSMA/CD

Carrier Sense Multiple Access / Collision Detection

- Sending node will wait till it can hear no traffic on the network

CSMA/CD

Carrier Sense Multiple Access / Collision Detection

- All hosts hear noise of collision
- Jamming signal sent out

CSMA/CD

Carrier Sense Multiple Access / Collision Detection

- All hosts wait random length of time before resending packet

CSMA/CA

Carrier Sense Multiple Access / Collision Avoidance

- Before sending a message, host sends out a warning.
- When other hosts hear warning, they wait to hear package fly by

CSMA/CA

Carrier Sense Multiple Access / Collision Avoidance

- Before sending a message, host sends out a warning.
- When other hosts hear warning, they wait to hear package fly by

CSMA/CA

Carrier Sense Multiple Access / Collision Avoidance

- As with CSMA/CA,
 - *Jamming Signal sent out*
 - *All hosts delay random length*

Terminology: Collision Ethernet

- CS
 - *Carrier Sense*
- MA
 - *Multiple Access*
- CD
 - *Collision Detection*
- CA
 - *Collision Avoidance*

NETWORK INFRASTRUCTURE

Hub, Switch, Bridge, Router

Passive Hub:

Passive Hubs:

- Cable splitter
- Broadcasts any message received to all connected devices
- Bus topology
 - *Risk of collisions*
- No power-source
 - *Signal weakening*

Active Hub:

Active Hubs:

- Same broadcast
 - *Bus topology*
 - *Risk of collision*
- But has a power source
 - *Strengthens signal*
- Can be connected to other Active Hubs

Intelligent Hubs:

- Active Hubs with extra functionality
 - *Diagnostics*
 - *Management of ports*

Bridge:

Bridge:

- Breaks up large network into smaller sets of connected hosts:
 - *Collision Domains*
- Will only allow through traffic destined to hosts beyond that Bridge.
- Helps to avoid collisions

Switch:

Switch:

- Point-to-point connection
- Collision Domain of two machines
- Can also interface between media

Router:

What we have covered in this video:

- Network components
- Collisions
- Infrastructure

In the next video we will cover:

- IP Addressing
 - *Calculations*
 - *Masking*
 - *Classless & Classful systems*
- Subnetting calculations
